Education

NUS :: Department of Industrial Systems Engineering and Management

Singapore

MULTI-OBJECTIVE SIMULATION OPTIMIZATION, PH.D.

2014.08-2018.11

- Research Topic : Ranking and Selection, Optimal Computing Budget Allocation, Randomized Search, Simulation Analytics.

Nanjing University :: Department of Management Science and Engineering

Nanjing, China

FINANCIAL ENGINEERING, B.ECON; INDUSTRIAL ENGINEERING, B.ENG.

2010.09-2014.06

- Financial Engineering: Accounting, Corporate Finance, Econometrics, Equity Analysis, Financial Economics, Financial Engineering, Financial Markets Microstructure, Financial Risk Management, Fixed Income Securities, Macro/Microeconomics, Structured Finance Products.
- Industrial Engineering: Operations Management, Operations Research, Supply Chain Management.

Experience

National University of Singapore

Singapore

RESEARCH FELLOW, CENTRE OF EXCELLENCE IN MODELLING AND SIMULATION FOR NEXT GENERATION PORTS

2018.10-Present

- Optimal Computing Budget Allocation for Binary Classification with Label Noises
- Design for High-Performance Framework of Multi-fidelity Simulation Optimization
- Automatic Stowage Planning for American President Lines Ltd.
- Online Vehicle Routing Under Stochastic Demands Using Approximate Dynamic Programming

WorldQuant LLC

Singapore

PART-TIME RESEARCH CONSULTANT (QUANTITATIVE RESEARCHER)

2018.09-2019.10

- Developed near 400 quantitative trading strategies/alphas on the WorldQuant's WebSim platform to seek abnormal returns and statistical arbitrage in the US, European and Asian markets.
- The idea of my strategies comes from the utilization of various data sources (e.g., price/volume, fundamental data, analyst estimate data, sentiment data, news data, and options data).
- Most strategies have high Sharpe ratios (~ 2.2), stable annualised returns ($\sim 10\%$, after neutralisation), low maximum drawdown ($\sim 2\%$) and moderate daily turnover ($\sim 18\%$).
- One among the top strategies has one and half year out-sample Sharpe ratio 5.26, 15.40% annualized return, 16.35% margin, 18.83% daily turnover, and ten-year in-sample Sharpe ratio 3.47, 13.63% annualized return, 13.40% margin, and 20.34% daily turnover, see <http://greenwicher.com/me/misc/stock-long-short-trading-strategy-asi-top1500-price-volume-earnings.pdf>.
- Some trading strategies perform quite well even in a highly liquid stock pool (e.g., Russell top 200).
- Ranked the 1st place in the region of China and Singapore for the WorldQuant Spring Alphathon, 2017.
- Best Record: top 10 in the world.

Martian Capital Management PTE. LTD.

Singapore

QUANTITATIVE RESEARCHER INTERN

2018.03-2018.09

- Developed an automatic framework in Python to identify and visualize promising leading indicators for the prediction of the forward return of month-1 future contract of WTI/Brent Crude/Heating Oil/RBOB Gasoline/Gasoil.
- Developed a flexible backtesting framework in Python to cross-validate various multi-period strategies (and hyper-parameters) and generate a detailed tear sheet report via LaTeX.
- Developed several machine-learning-based multi-factor long-short trading strategies with three years out-of-sample Sharpe ratio 1.4++ based on 6-years weekly fundamental data from the U.S. Energy Information Administration and daily price data from Thomson Reuters.

ADVANCE.AI

Singapore

DATA SCIENTIST INTERN

2017.07-2017.10

- Proposed two graph-based anti-fraud algorithms (community and anomaly detection) for GoJek in Hive SQL and Spark to identify fraudulent drivers/customers with abnormal topological structures in the co-occurrence graph.
- Deployed Tableau/Gephi dashboard to visualize the communities of fraudulent drivers/customers.
- Conducted feature engineering and applied isolation forest, ensemble supervised learning to predict fraudulent and abnormal scores for the given email addresses.

Honors & Awards

- 2019.01 **Passed FRM Part 2**, Global Association of Risk Professionals
- 2018.08 **Passed CFA Level I**, CFA Institute
- 2017.04 **Gold Medal**, WorldQuant Global Alpha Building Competition
- 2017.03 **Level 5 (Finalist)**, Google FooBar Coding Challenge
- 2014.05 **Graduate of Excellence**, Nanjing University
- 2013.02 **INFORMS Paper Award (0.04%, 2/5536)**, The Mathematical Contest in Modeling
- 2013.02 **Outstanding Winner (0.2%, 11/5536)**, The Mathematical Contest in Modeling

Skills

- **Programming:** Python, Matlab, R, Cpp (beginner), SQL (beginner), \LaTeX
- **Languages:** Mandarin Chinese (native), English (fluent), Japanese (beginner)
